Trace element information values for Ag, Au, Ga, Ge, Ir, Os, Pt, and Re are shown on page 3.

The requirements of ISO Guides 30, 31, and 35 were followed for the preparation of this Certified Reference Material and certificate of analysis.

¹ For each element, the certified value listed is the present best estimate of the true value based on the mean of the weighted results of an interlaboratory testing program. See page 3 for more information on its calculation.

² For each element, the uncertainty listed is based on a statistical evaluation of the contributions of homogeneity and the interlaboratory testing program. See page 3 for more information on its calculation.

³ Values are given in weight percent. Values in brackets are reported by difference.

⁴ Reference values are not certified and are provided for information only.

For each element, in accordance with the requirements of ISO 17034 and Guide 35, an effort must be made to account for the effects on the certified value of the uncertainty estimate from homogeneity testing (H) and the uncertainties of the contributing laboratories. The average (A) is calculated using a weighted mean where the reciprocal of the square of each laboratory's combined uncertainty (C_L), calculated from its standard deviation (S_L) and its uncertainty estimate (U_L), is used as the weight (W_L) for its mean (M_L). The standard deviation (S) is calculated as the square root of the reciprocal of the sum of the weights. U_1 is the combined uncertainty from homogeneity and labs. U_2 is U_1 multiplied by the coverage factor (95 % t-statistic). U_3 is U_2 divided by the square root of the number of determinations (n). Thus:

$$C_{L} = \sqrt{S_{L}^{2} + U_{L}^{2}} \qquad W_{L} = \frac{1}{C_{L}^{2}} \qquad A = \frac{\sum_{i=1}^{n} W_{L} M_{L}}{\sum_{i=1}^{n} W_{L}} \qquad S = \frac{1}{\sqrt{\sum_{i=1}^{n} W_{L}}} \quad U_{1} = \sqrt{H^{2} + S^{2}} \qquad U_{2} = t \times U_{1} \quad U_{3} = \frac{U_{2}}{\sqrt{n}}$$

All but the final reported values are taken to two significant figures as determined by each quantity's uncertainty estimate. The final reported Uncertainty is U_3 rounded to one significant figure and represents the half width of the 95 % confidence interval for the **Certified** value. The final reported **Certified** value is A rounded to the same decimal place as the Uncertainty. The Uncertainty is a measure of the quality of the **Certified** value.

The Tolerance is a measure of the expected performance of an analysis. This involves further expanding the sample uncertainty to include instrument and operator uncertainty, for those without access to such calculations.

For further information regarding the confidence interval for the certified value see ISO Guide 35:2006 section 6.

<u>Analysis:</u> Chemical analyses were made on solid pieces and chips prepared by an end mill from representative samples for the certified portion of the lot in accordance with ASTM Standard Practice E1806. The laboratories participating in the testing followed the requirements of ISO Standard 17025.

<u>Traceability:</u> The following Certified Reference Materials were used to validate the analytical data: 12X12853K, 13X12537, 13X12854D, 13X17002D, 13X41800A, 13X4200A; AR 215A, 555, 644, 645, 659, 668, 673, 675, 869, 870, 871, 960, 1647, 1650, 1651, 1652, 1657, 3040; BAS 331, 338, 464/1, 465/1; BS CCA304-2, CSN-4, 17-4PHC, 80D, 81D, 81G, 81N, 86C, 87D, 93D, 181A, 304, 304A, 304B, 309, 316E, 316F, 321E, 3951; ECRM 85-1, 86-1, 87-1; IARM Fe304H-18, 2F, 6H, 6J, 153A, 162D; IMZ 1.27/3, 504; JSS GS-1D, 655-13; LECO 501-504, 502-416, 502-856, 502-863, 502-869, 502-890, 502-903, 502-928, 502-963, 762-747; NCS NS11037, NS11079; SRM C1154, 101E, 101F, 101G, 160B, 361, 363; TL2003.

<u>Homogeneity:</u> This Certified Reference Material (CRM) was tested for homogeneity using ASTM Standard Method E826 and found acceptable. It was also examined by spark atomic emission spectrometry and found to be compatible with the following Reference Materials: 13x17002D; AR 3040; BS CA304-2, 81G, 304A, 304B, 321D; IARM Fe304H-18; TL2003.

<u>Validity statement:</u> ISO Guide 31 states that the certification should contain an expiration date for all materials where instability has been demonstrated or is considered possible, after which the certified value is no longer guaranteed by the certifying body. The certification of BS 304C is valid indefinitely. The certification is nullified if this CRM is damaged, contaminated, or otherwise modified.

Storage: This CRM must be stored in a cool, dry, non-corrosive environment.

Source: The bar stock for this CRM was produced by North American Stainless; Ghent, KY.

<u>Form:</u> This CRM is machined in the form of a disc, approximately 38mm in diameter and 19mm thick by Brammer Standard Company, Inc.

<u>Use:</u> This CRM is intended for use in spark atomic emission, glow discharge, and x-ray spectrometric methods of analysis. Refer to ISO Guide 33 for information about the use of Certified Reference Materials.

Certified Area: The entire depth of the CRM may be used.

Caution: As with any bar material, avoid spark atomic emission spectrometric burns in the center of the CRM (5 mm radius), as some segregation may be present.

<u>Sample Preparation:</u> For best analytical results, use the same method for preparing the analytical surface on all reference materials as used for production specimens. Avoid overheating the sample during surface preparation.

Caution: CRM contains significant insoluble soft metal inclusions. Surface smearing may occur. Spark atomic emission spectrometers may require extended preburns to compensate.

<u>Certificate Number:</u> The unique identification number for this certificate of analysis is 304C-022324. You may obtain information on revisions of certificates from the internet at <u>www.brammerstandard.com</u>.

<u>Safety Notice:</u> A Safety Data Sheet (SDS) is not required for this material. This material will not release or otherwise result in exposure to a hazardous chemical, under normal conditions of use. Inquiries concerning this Reference Material should be directed to:

Brammer Standard Co., Inc. Phone: (281) 440-9396 Web: www.brammerstandard.com

14603 Benfer Road

Houston, Texas 77069-2895 USA Fax: (281) 440-4432 Email: contact@brammerstandard.com

Brammer Standard Company, Inc., is accredited by the American Association for Laboratory Accreditation (A2LA) to ISO Standard 17034 as a Reference Material Producer for the production of Certified Reference Materials and Reference Materials (our current Certificate Number 656.02 expires 01/31/2025)

Brammer Standard Company's Chemical Laboratory is accredited by A2LA to ISO Standard 17025. (Our current Certificate Number 656.01 expires 01/31/2025)

By current Certificate Number 10539 expiring 01/01/2027, the Quality System of Brammer Standard Company, Inc., is registered to ISO 9001 by National Quality Assurance (NQA), U.S.A.

The scopes of accreditation are listed on the website: www.brammerstandard.com
