

BRAMMER STANDARD COMPANY, INC.

Certificate of Analysis

BS 140/3

Certified Reference Material for 50% Ferrosilicon

	Certified Value ²	Estimate of Uncertainty ³	Certified Values⁴	Certified Value ²	Estimate of Uncertainty ³
Fe	51.0	0.4			
Mn	0.60	0.01			
Si	46.9	0.3			

Informational Values^{4,5}

Al (0.59)	C (0.044)	Ca (0.095)	Cr (0.18)	Cu (0.091)
Ni (0.090)	P (0.018)	S (0.004)	Ti (0.073)	

¹ This certificate is a revision. For more information on the nature and extent of the revision, see the revision statement on page 4.

² For each element, the certified value listed is the present best estimate of the true value based on the mean of the weighted results of an interlaboratory testing program. See page 3 for more information on its calculation.

³ For each element, the uncertainty listed is based on a statistical evaluation of the contributions of homogeneity and the interlaboratory testing program. See page 3 for more information on its calculation.

⁴ Values are given in weight percent.

⁵ Values in parentheses are not certified and are provided for information only.

The requirements of ISO Guides 31, 34, and 35 were followed for the preparation of this Certified Reference Material and certificate of analysis. This is a Certified Reference Material as defined by ISO Guide 30.

For each element, in accordance with the requirements of ISO Guides 34 and 35, an effort must be made to account for the effects on the certified value of the uncertainty estimate from homogeneity testing (H) and the uncertainties of the contributing laboratories. The average (A) is calculated using a weighted mean where the reciprocal of the square of each laboratory's combined uncertainty (C_L), calculated from its standard deviation (S_L) and its uncertainty estimate (U_L), is used as the weight (W_L) for its mean (M_L). The standard deviation (S) is calculated as the square root of the reciprocal of the sum of the weights. U_1 is the combined uncertainty from homogeneity and labs. U_2 is U_1 times the coverage factor (95 % t-statistic). U_3 is U_2 divided by the square root of the number of determinations (n). Thus:

$$C_L = \sqrt{S_L^2 + U_L^2} \quad W_L = \frac{1}{C_L^2} \quad A = \frac{\sum_{i=1}^n W_L M_L}{\sum_{i=1}^n W_L} \quad S = \frac{1}{\sqrt{\sum_{i=1}^n W_L}} \quad U_1 = \sqrt{H^2 + S^2} \quad U_2 = t \times U_1 \quad U_3 = \frac{U_2}{\sqrt{n}}$$

All but the final reported values are taken to two significant figures as determined by each quantity's uncertainty estimate. The final reported Uncertainty is U_3 rounded to one significant figure and represents the half width of the 95 % confidence interval for the **Certified** value. The final reported **Certified** value is A rounded to the same decimal place as the Uncertainty. The Tolerance is the half width of the 95 % confidence interval for measurements rounded to the same decimal place as the Uncertainty. The Uncertainty is a measure of the quality of the **Certified** value. The Tolerance is a measure of the expected performance of an analysis.

For further information regarding the confidence interval for the certified value see ISO Guide 35:2006 section 6.

Analytical Method Codes:

1 Combustion (ASTM E1019)	7 Photometric	13 Titrimetric
2 Fusion (ASTM E 1019)	8 Flame Atomic Absorption	14 DCP Atomic Emission
3 Spark Atomic Emission	9 GF Atomic Absorption	15 HG Atomic Fluorescence
4 ICP Atomic Emission	10 X-Ray Fluorescence	16 Difference
5 ICP Mass Spectrometry	11 GD Atomic Emission	17 Wet
6 Gravimetric	12 GD Mass Spectrometry	

ICP = Inductively Coupled Plasma GF = Graphite Furnace GD = Glow Discharge
DCP = Direct Current Plasma HG = Hydride Generation

Analysis: Chemical analyses were made on samples taken from the bulk material. The original participating laboratories normally followed the requirements of ISO Standard 17025. The laboratories participating in the stability testing followed the requirements of ISO Standard 17025. Methods of analysis used were a those listed on page 2.

Traceability: The following Certified Reference Materials were used to validate the analytical data listed on page 2 — AR 673; LECO 501-502; SRM 347, 3109A.

Homogeneity: This Certified Reference Material (CRM) was tested for homogeneity using ASTM Standard Method E 826 and found acceptable.

Validity statement: ISO Guide 31 states that the certification should contain an expiration date for all materials where instability has been demonstrated or is considered possible, after which the certified value is no longer guaranteed by the certifying body. The certification of BS 140/3 is valid for 20 years from the date of this certification. The certification is nullified if this CRM is damaged, contaminated, or otherwise modified.

Source: This material was produced by Union Carbide Corporation/Ferroalloys Division; Ashtabula, Ohio.

Form: This CRM is available only in the form of minus 100 mesh powder in 100 gram containers.

Use: This CRM is intended for use in x-ray spectrometric and solution methods of analysis. Refer to ISO Guide 33 for information about the use of Certified Reference Materials.

Sample Preparation: For best analytical results, use the same method for preparing the analytical surface on all reference materials as you use for production specimens.

Certificate Number: The unique identification number for this certificate of analysis is REV140/3-093016. You may obtain information on revisions of certificates from the internet at www.brammerstandard.com.

Safety Notice: A Material Safety Data Sheet (MSDS) is not required for this material. This material will not release or otherwise result in exposure to a hazardous chemical, under normal conditions of use. Inquiries concerning this Reference Material should be directed to:

Brammer Standard Co., Inc.
14603 Benfer Road

Houston, Texas 77069-2895 USA

Phone: (281) 440-9396 **Web:** www.brammerstandard.com

Fax: (281) 440-4432 **Email:** contact@brammerstandard.com

Brammer Standard Company, Inc., is accredited by the American Association For Laboratory Accreditation (A2LA) to ISO Guide 34 as a Reference Material Producer for the production of Certified Reference Materials and Reference Materials (Certificate Number 656.02)

Brammer Standard Company's Chemical Laboratory is accredited by A2LA to ISO Standard 17025. (Certificate Number 656.01)

By Certificate Number 10539, the Quality System of Brammer Standard Company, Inc., is registered to ISO 9001:2008 by National Quality Assurance (NQA), U.S.A.

The scopes of accreditation are listed on the website: www.brammerstandard.com

Expiration: 20 years from the date of certification, which is September 30, 2036. This material is valid until that date.

Revision: This certified reference material was originally certified as a reference material in 1979 and then revised on June 15, 1987. The documented validity for Brammer Standard Company powder products is 20 years. Additional inter-laboratory testing was performed in 2016 to prove stability and has been included on this certificate. C has changed from informational to certified. Al, Ca, Cu, Ni, and Ti changed from certified to informational. Revised values for all elements except Cr, Mn, and S are presented.
